

RISK

I could become overwhelmed and too stressed to finish the project

I could encounter issues in testing that I don't feel confident to fix

My computer could break

There could be bugs that no one on earth can solve

Action to mitigate

Ask for support on technical issues from my tutor and colleagues

Try to achieve 80% coverage but send the first version with lower test coverage if needed

Update git hub regularly so I can access project from any computer

Start project over
